

MEMORY HILOGGER LR8400-20, LR8401-20, LR8402-20

Portable Data Logger with 30 Standard Channels Expandible to 60 Channels

Only the size of an A4 sheet of paper, the HIOKI LR8400-20 Series is the realization of our goal to build a logger that provides the existing functionality of a multi-channel data logger in a portable format. The new model comes with 30 channel capability as standard, to which another 30 channels can be added. All input channels for measuring temperature (with thermocouples), or voltage are isolated for safety, culminating in a powerful multi-measurement system that also offers pulse and logic inputs. Long-term logging is coupled with the capability to protect data against unexpected power outages and other problems for stable recordings over an entire year (see note).

Note: Continuous recordings lasting longer than 1 year are also possible.

HIOKI company overview, new products, environm and other information are available on our website

In fuel cell, electric automobile and other development

- Environmental measurements to prevent global warming
- Development of fuel cell materials, energy field
- Development of automobiles, testing of automobile parts
- Maintenance and inspection of equipment
- Monitoring plants
- Testing of electrical products
- Impedance testing of electronic parts

Maximum voltage that can be input

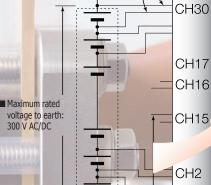

between terminals: ±100 V DC

CH1

In the development of fuel cells, multiple power-generating cells are connected to form a stack. Independent measurements of each cell require multi-channel measurements of DC voltage, DC current, temperature and other parameters.

The LR8400-20 Series comes with 30 channels as standard, which can be expanded to 60 channels.

3

Maximum rated voltage between each channels of UNIVERSAL UNIT: 300 V DC

Maximum rated voltage between each channels of VOLTAGE/TEMP UNIT: 250 V DC

High withstand voltage

The HiLOGGER measures not only fuel cells, but also batteries for UPS (uninterruptible power supplies) devices used in buildings as well as batteries consisting of cells and packaging connected in stacks that require multi-point measurements.

In such measurements, high voltage for the whole stack is applied between channel-to-channel and channel-to-ground. Only a measuring instrument with isolated inputs and high-capacity withstand voltage characteristics can endure this.

High-speed sampling

In the development of automobiles such as electric vehicles (EV) and plug-in hybrid vehicles (PHV) that use motors for propulsion, abrupt changes in load need to be measured.

This makes the multi-channel, high-speed 10 ms sampling capability of the LR8400-20 Series an indispensable feature.

- Measure and record:
- **Temperature & humidity**
- A variety of transducer outputs (DC voltage)

Resistance values

Voltage measurement (DC only)

- 30 input channels
- Note: The LR8400-20, LR8401-20 and LR8402-20 models differ in the combination of input functions and terminals.
- All input channels are isolated Note: Maximum rated voltage above ground between the HiLOGGER and analog inputs is 300 V AC/DC.
- Note: Maximum channel-tochannel voltage is a high voltage of 300 V DC. (Maximum voltage for models with M3 screw input terminals is 250 V DC.)

Temperature & humidity measurement

- Temperature measurements of thermocouples on 30 channels
- M3 screw terminal inputs enable secure connection of even thin thermocouples
- Special sensor permits humidity measurements on 30 channels (optional 72000)
- 30 channels (optional Z2000) Note: The sensor power supply is the M3 mm dia. screw terminal block on the left side. Note: Both universal input terminals and M3 mm dia. input terminals enable humidity measurements.

Temperature & resistance measurement

- Universal inputs support temperature measurements using Platinum resistance temperature sensor (Pt100/ JPt100), or resistance measurements (four wires)
- Note: These cannot be measured using the M3 screw input terminals units.
- Note: Supports resistance recording to enable assessment of changes in resistance in the device under test. 4-terminal method, measurement resolution $0.5 \text{ m}\Omega$ -, testing current 1 mA

4-20 To record 4 - 20mA instrumentation signals, attach a commercially available 250Ω shunt resistance to the input terminals (between + and -) to convert the signals to 1 - 5 V. Then use the 1-5V or the 10V f.s. input range in the HiLOGGER.

0

A compact A4 size enhances mobility A compact A4 size footprint makes it ideal for use in virtually any environment.

■ Helps also in collecting automotive data Ideal for testing and collecting data on the vibration characteristics of automotive parts

Pulse totalization measurement

- 8 channel inputs (pulse and digital input selectable for each channel)
- For measuring energy consumption and cumulative flow
- The input signal shares common ground with the HiLOGGER
 Note: M3 screw input terminals provide direct connection

Pulse rotations measurement

- 8 channel inputs (pulse and digital input selectable for each channel)
- For measuring rotational irregularities of motors and drills

Pulse totalization

revolution

 The input signal shares common ground with the HiLOGGER Note: M3 screw input terminals provide simple connection

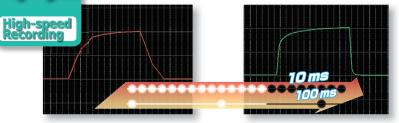

Logical 1-0 measurement

- 8 channel inputs (digital and pulse input selectable for each channel)
- 1 or 0 is recorded for each recording interval
- The input signal shares common ground with the HiLOGGER Note: M3 screw input terminals provide simple connection

Accurately capture any phenomena you want to measure

Highlights

Sampling at 100 ms intervals cannot capture abrupt load changes

Sampling the same waveform at ten times the speed, at 10 ms intervals, accurately captures the changes.

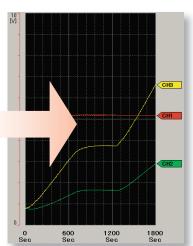

■ 10 ms high-speed sampling

The development of hybrid and electric automobiles requires instruments that can measure abrupt load changes. Channels 1 to 15 provide 10-ms sampling and channels 16 to 30 provide 20-ms sampling. This channels allow you to track waveforms not possible with earlier models.

Note: Measurements on channels 31 to 60 provide 50-ms sampling.

Without electric noise reduction, you will obtain a waveform like the one above in temperature measurements of an electromagnetic cooker

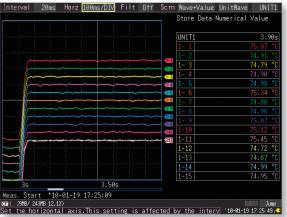

A digital filter in the HiLOGGER eliminates high-frequency noise to enable accurate temperature waveforms

Enhanced noise suppression A digital oversampling filter function reduces inverter switching noise and 50/60 Hz hum noise, a concern in earlier models, during recording.

Note: The noise reduction effect improves with longer recording intervals (i.e., at slower sampling speeds).

■ 5.7 inch TFT LCD display is easy to view even at an angle The LCD has a wider visual angle and is larger (5.7 inches, 640 × 480 dots)

than the STN LCD in our previous model (8420-51s) to facilitate observation of waveforms on multiple channels.

Store data securely for more than 1 year

Compatible with USB memory devices

For even greater convenience, the HiLOGGER now provides support for USB memory devices. Measurements can now immediately be written to a USB memory device in real-time. USB memory devices are also a handy means to transfer data to a PC.

Note: Although USB memory devices enable real-time saving $of \ data, for \ more \ reliable \ data \ protection \ we \ recommend \ use$ of HIOKI CF cards, which are guaranteed to work with the instrument, for real-time saving of data.

Saving data to CompactFlash (CF) card Use only HIOKI CF cards, which are manufactured to strict industrial standards, for long-term storage of important data.

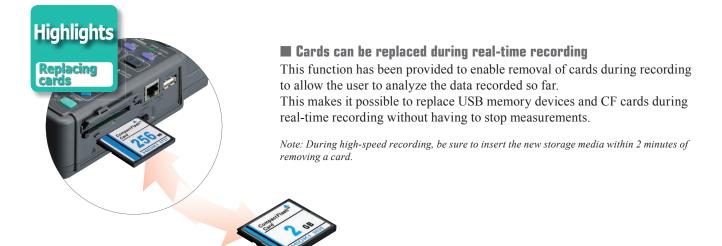

Note: Operation of non-HIOKI CF cards is not guaranteed

Recording Capacity

Note: Use only HIOKI CF cards that are guaranteed to operate with the HiLOGGER for continuous long-term recording

	Recording of 30 analog channels only (no pulse measurement, alarm output or waveform processing data)				
Recording intervals	Internal memory (16 MB)	Model 9727 (256 MB)	Model 9728 (512 MB)	Model 9729 (1 GB)	Model 9830 (2 GB)

5min to 1hour	"★"	"★"	"★"	"★"	"★"

Maximum recording time is inversely proportional to number of recording channels.
Because the actual capacity of a CF card is less than that indicated, and because the header portion of waveform files is not included in capacity calculations, expect actual maximum times to be about 90% of those in the table. " \star " exceeds 1 year.

A host of useful functions and features

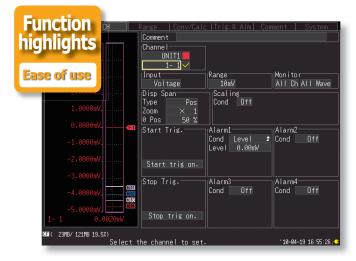

Up to two additional 15 channel input units can be added

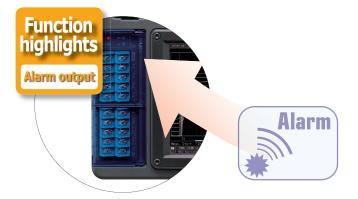

The need for more measurement channels can be met even after purchasing the instrument. The instrument comes with 30 channels as standard, but another two 15 channel input units can be added to expand the total number of channels to 60.

Note: The units provided with the unit as standard cannot be removed.

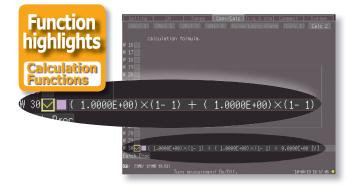

■ Input setting screens with waveform monitoring The HiLOGGER adopts the setting screens that earned its sister model (8430-20) a reputation for user-friendliness. Range settings, warnings, triggers, waveform processing and other measurement input settings can be taken in at a glance.

Function

Trickle charging the internal battery An internal battery (optional accessory) is charged when the AC adapter is connected. Since the internal battery will automatically take over in the event of a sudden power outage, it permits uninterruptible operation.

Alarm output

The HiLOGGER outputs a signal when alarm criteria are satisfied and also sounds a buzzer. Four systems are provided as standard and separate criteria can be set for each input source enabling OR and AND criteria between channels.

Note: Open-collector output (5 V voltage output and relay drive capacity 5 to 30 V, 200 mA)

Protection of files being stored on external storage media

An internal high-capacity capacitor will provide enough power to store any data at risk on a CF card or USB memory device should a sudden power outage occur during long-term storage. This reduces the risk of data loss and corruption of the file system. Measurements will resume as soon as the power returns.

Real-time processing functions

The HiLOGGER comes with **[four arithmetic operation]** functions for processing between channels. Data processed in real-time can be displayed in graph form. In addition, processing results for 30 channels are stored in internal memory and can be handled as data for independent input channels.

Records average values every 30 minutes The HiLOGGER contains a **[time-span processing]** function. The instrument will save processing data as text data for a preset time period in real-time.

Simultaneous recording to storage media and PC Measurement data can be simultaneously saved to external

Control of measurements from a PC screen

Connect the PC to the HiLOGGER using USB or via LAN* (see note). Use the supplied Logger Utility software to record data on a PC in real-time. Scroll backwards through the displayed trend graph window to view past waveforms even while recording. Up to five HiLOGGERs can be connected to one PC.

Analyze after measuring

Our new "dual-knob function" greatly simplifies data analysis. Two separate waveform windows are provided, with the displayed waveforms showing different time-axis scales (time bases). This capability substantially simplifies long-term data analysis. (Patent pending)

■ Remote control through HTTP server function* Without the need to install additional software, you can use an ordinary web browser on your PC to set up the HiLOGGER, acquire data and monitor data on the screen. *Note: Waveform data cannot be downloaded from internal memory while measuring.*

Product Specifications

General specif	ications (product and accuracy guaranteed for one year)
Internal memory	16 Mega-bytes (8M data points)
Internal clock	Auto calendar, Precision ±3 s/ day (at 23 °C/ 73 °F)
Accuracy of timebase	-
Backup battery Operating temp. &	For clock and setting conditions: battery life 5 years (at 23 °C/73 °F) 0 °C (32 °F) to 40 °C (104 °F), 80 % rh or less (non-condensating, when
humidity Storage temp. &	charging: 10 °C/ 50 °F to 40 °C/ 104 °F)
humidity	-10 °C (14 °F) to 60 °C (140 °F), 80 % rh or less, (non-condensating)
Conforming standards	
Anti-vibration	JIS D1601: 1995 5.3 (1) Corresponds to Class 1: a passenger car, Condition: class A
External control terminal	External trigger input, Trigger output, 4 channel alarm outputs, +12 V/ 100 mA max. output, GND
Dimensions & Mass	Approx. 272 mm (10.71 in) W × 182.4 mm (7.18 in) H × 66.5 mm (2.62 in) D, 1.8 kg (63.5 oz), (LR8400 main unit, except the Battery Pack 370 g/ 13.1 oz) Approx. 272 mm (10.71 in) W × 234.8 mm (9.24 in) H × 66.5 mm (2.62 in) D, 2.6 kg (91.7 oz), (LR8500 × 2 and LR8400 × 1, except the Battery Pack 370 g/ 13.1 oz)
Accessories	Detailed operating manual ×1, Measurement guide ×1, AC ADAPTER 9418- 15 ×1, USB cable ×1, CD-R (data collection software "Logger Utility") ×1
Data storage n	
CF card	CF card slot ×1, HIOKI 9727 (256 MB), 9728 (512 MB), 9729 (1 GB), 9830 (2 GB), Data format: FAT, FAT32
USB memory	Series A receptacle
Communicatio	
	IEEE 802.3 Ethernet 100BASE-TX, DHCP, DNS capable • Data acquisition, condition settings used with the Logger Utility software
LAN interface	(supplied as standard) • Use the communication command to set and measure
(ver. 1.20 or later)	 Data download via FTP server function (stored in the CF card or the USB memory) Automatically transmit data via FTP client function
	Remote control via HTTP server function Send mail function via E-mail system
	USB 2.0 High-speed capable, series mini-B receptacle
USB communication	 Data acquisition, condition settings used with the Logger Utility software (supplied as standard)
interface	 Configure the unit and measure using communication commands Transfer data from the CF card to a PC via USB drive mode (data
	transfer not possible from USB memory sticks)
Display section	
Display device	5.7 inch TFT color liquid crystal display (640 × 480 pixel), horizontal 15 division, vertical 10 division, selectable between English and Japanese displays, Back light saver available
LCD Brightness	Selectable from 100, 70, 40, or 25 %
Power supplies	
AC Power	Using the AC ADAPTER 9418-15 (supplied as standard, 100 to 240 VAC, 50/60 Hz), Power consumption: 7 VA (with battery pack removed and maximum brightness)
	Using the BATTERY PACK Z1000 (optional accessory, AC adapter has priority when used in combination with battery pack)
DC Power	Continuous operation time: 5 hours (at 23 °C, LCD brightness 25 %)
	Fast recharging time: 3 hours (using the AC adapter and main unit to recharge the battery, at 23 °C, reference value)
	10 to 28 VDC (Rechargable voltage 12 to 16 VDC, Please contact your HIOKI distributor for connection cord)
External	Maximum rated power: 24 VA (at 16 VDC external power supply, battery
Trigger functio	charge, LCD brightness 100 %)
Trigger mode,	Modes : Single / Repeat, Timing : Start / Stop / Start & Stop, Logical
timing	sum (OR) and product (AND) of each trigger source, Selectable for each channel
	Configure each individual channel for 30 channels or up to 60 channels
Analog signal source	depending on number of additional terminal modules installed. [Level trigger] Triggers when rising or falling through preset level
300100	[Window] Triggers when entering or exiting range defined by preset upper and lower limit values
	8 channels of pulse totalizer inputs
Pulse signal source	[Level trigger] Triggers when rising or falling through preset level [Window] Triggers when entering or exiting range defined by preset
	upper and lower limit values 8 channels of digital signal inputs
Digital signal source	[Logic pattern trigger] agreement (or disagreement) in the specified $[1/0/\times]$ pattern
Timer trigger	Set up for year/ month/ day/ hour/ minute/ second
Trigger output	Open collector (active low, with 5 V output, at least 10 ms pulse width), M3 mm screw terminal
Alarm output	
Number of channels	
Alarm source	60 channels of analog input, 8 channels of pulse totalizer inputs or digital inputs, Thermocouple burn-out detection
Alarm type	Level, Window, Logic pattern, Output latch/ no latch, Cancel alarm while measuring
Alarm sound	Buzzer, ON/OFF possible
Alarm output	Open collector (active low, with 5 V output), M3 mm screw terminal,
	Output refreshed at every recording interval
Output sink current	200 mA at 5 V to 30 VDC

	Settings 10 ms*1, 20 ms*2, 50 ms*3, 100 ms to 1 hr (19 selections)				
	Note: All input channels are scanned at high speed during every recording

Optional Product Specifications

VOLTAGE/TEMP UNIT LR8500 (product and accuracy guaranteed for one year)		
Number of input channels	15 channels (input type selectable from voltage, thermocouple, humidity, for each channel), M3 screw terminals (2 terminals per channel) Note: Isolated from each channel to chassis	
Measurement parameters	Voltage, Temperature with thermocouples (K, J, E, T, N, R, S, B, W) Note: Isolated between channels and from each channel to chassies Humidity with the sensor Z2000 Note: Not isolated between channels nor from each channel to chassies	
Input conditions	Input resistance: $1 M\Omega$ (at voltage/ thermocouple measurement) Max. rating: $\pm 100 V DC$ (max. voltage between input terminals without damage)	
Max. rated voltage between isolated input channels	250 V DC (max. voltage between input channel terminals)	
Max. rated voltage from isolated terminals to ground	300 V AC, DC (max. voltage from terminals to chassis ground without damage)	
Measurement accuracy	Refer to MEMORY HiLOGGER main unit specifications	
Dimensions & Mass	Approx. 128 mm (5.04 in) W × 52.8 mm (2.08 in) H × 64.5 mm (2.54 in) D, 380 g (13.4 oz)	

UNIVERSAL UNIT	LR8501 (product and accuracy guaranteed for one year)
Number of input channels	15 channels (input type selectable from voltage, thermocouple, Pt 100/ JPt 100, humidity, resistance, for each channel), Push-button type terminals (4 terminals per channel) Note: Isolated from each channel to chassis
Measurement parameters	Voltage, Temperature with thermocouples (K, J, E, T, N, R, S, B, W) Note: Isolated between channels and from each channel to chassis Platinum resistance temperature sensor (Pt 100, JPt 100, 3-wired/4-wired, testing current 1 mA) Note: Not isolated between channels Resistance (4-wired, testing current 1 mA) Note: Not isolated between channels Humidity with the sensor Z2000 Note: Not isolated between channels nor from each channel to chassis
Input conditions	Input resistance: 1 M Ω (at voltage/ thermocouple measurement), 2 M Ω (at platinum resistance temperature sensor, or resistance measurement) Max. rating: ± 100 V DC (max. voltage between input terminals without damage)
Max. rated voltage between isolated input channels	300 V DC (max. voltage between input channel terminals)
Max. rated voltage from isolated terminals to ground	300 V AC, DC (max. voltage from terminals to chassis ground without damage)
Measurement accuracy	Refer to MEMORY HiLOGGER main unit specifications
Dimensions & Mass	Approx. 128 mm (5.04 in) W × 52.8 mm (2.08 in) H × 64.5 mm (2.54 in) D, 300 g (10.6 oz)

Model Line-up		
Items	Specifications	Model LR8400-20 (with built-in VOLTAGE/TEMP UNIT × 2)
itemo	Built-in 30 channels Note: Isolated from each channel to chassis	
Anglesis	[UNIT-1, UNIT-2] M3 screw terminals × 30 channels (2 terminals per channel)	Caution: Built-in M3 screw terminal units cannot be removed or replaced
Analog input	Expandable by adding 30 more channels for a total of 60 input channels (optional input unit, Model LR8500 or LR8501, up to 2 units)	M3 screw M3 screw terminals × 15 terminals × 15
Measurement parameters	Voltage, Temperature with thermocouples (K, J, E, T, N, R, S, B, W) Note: Isolated between channels and from each channel to chassis Humidity with the sensor Z2000 Note: Not isolated between channels nor from each channel to chassis	
Input resistance	$1 \text{ M}\Omega$ (at voltage/ thermocouple measurement)	
Max. allowable input	±100 V DC (max. voltage between input terminals without damage)	
Max. rated voltage between isolated input channels	250 V DC (max. voltage between input channel terminals)	HIOKI
Max. rated voltage from isolated terminals to ground	300 V AC, DC (max. voltage from terminals to chassis ground without damage)	
Items	Specifications	Model LR8401-20 (with built-in UNIVERSAL UNIT × 2)
Analog input	Built-in 30 channels Note: Isolated from each channel to chassis [UNIT-1, UNIT-2] Push-button type terminals × 30 channels (4 terminals per channel)	Caution: Built-in push-button terminal units cannot be removed or replaced
	Expandable by adding 30 more channels for a total of 60 input channels (optional input unit, Model LR8500 or LR8501, up to 2 units)	Push-button type Push-button type
Measurement parameters	Voltage, Temperature with thermocouples (K, J, E, T, N, R, S, B, W) Note: Isolated between channels and from each channel to chassis Platinum resistance temperature sensor (Pt 100, JPt 100, 3-wired/ 4-wired, testing current 1 mA) Note: Not isolated between channels Resistance (4-wired, testing current 1 mA) Note: Not isolated between channels Humidity with the sensor Z2000	terminals × 15 ⁻ terminals × 15 ⁻
Input resistance	Note: Not isolated between channels nor from each channel to chassis $1 M\Omega$ (at voltage/ thermocouple measurement) $2 M\Omega$ (at resistance temperature sensor, or resistance measurement)	Million HOO And In Million HO
Max. allowable input	$\pm 100 \text{ V DC}$ (max. voltage between input terminals without damage)	
Max. rated voltage between isolated input channels	300 V DC (max. voltage between input channel terminals)	
Max. rated voltage from isolated terminals to ground	300 V AC, DC (max. voltage from terminals to chassis ground without damage)	
Items	Specifications	Model LR8402-20 (with built-in UNIVERSAL UNIT × 1, VOLTAGE/TEMP UNIT × 1)
Analog input	Built-in 30 channels Note: Isolated from each channel to chassis [UNIT-1] Push-button type terminals × 15 channels (4 terminals per channel) [UNIT-2] M3 screw terminals × 15 channels (2 terminals per channel) Expandable by adding 30 more channels for a total of 60 input channels	Caution: Built-in push-button terminal unit and M3 screw terminal unit cannot be removed or replaced
	(optional input unit, Model LR8500 or LR8501, up to 2 units)	
Measurement parameters	Voltage, Temperature with thermocouples (K, J, E, T, N, R, S, B, W) Note: Isolated between channels and from each channel to chassis Humidity with the sensor Z2000 Note: Not isolated between channels nor from each channel to chassis [UNIT-1 side only] Platinum resistance temperature sensor (Pt 100, JPt 100, 3-wired/ 4-wired) Note: Not isolated between channels Resistance (4-wired) Note: Not isolated between channels	Push-button type terminals x 15
Input resistance	$1~M\Omega$ (at voltage/ thermocouple measurement) $2~M\Omega$ (at platinum resistance temperature sensor, or resistance measurement)	HORI AND
Max. allowable input	±100 V DC (max. voltage between input terminals without damage)	
Max. rated voltage between isolated input channels	250 V DC at M3 screw terminals, 300 V DC at push-button type terminals (max. voltage between input channel terminals)	
Max. rated voltage from isolated terminals to ground	300 V AC, DC (max. voltage from terminals to chassis ground without damage)	

Bundled software specification

ns	0
	HIC

Logger Utility	(bundled application software)
Operating environment	One CD-R, CPU: Pentium 3 (500 MHz or more), at least 512 MB of memory Interface: USB, LAN (LAN not available with the Model 8430-20/-21) OS: Windows 2000 (SP4 or later)/ XP (SP2 or later)/ Vista (32-bit/ 64-bit), (Ver 1.50 or later) Windows 7 (32-bit/ 64-bit) (This software is compatible only to the MEMORY HiLOGGER LR8400-20s, LR8400-21s, 8423, 8430-20/-21)
Real-time data acquisition	Measurements on multiple loggers connected by LAN* or USB can be controlled to sequentially acquire, display and save waveform data (for recording up to 10 million samples) *LAN available with HLOGGER main unit Ver 1.20 or later Number of controllable instruments: up to 5 units Display: Waveforms (multiple time axis can be displayed), Numerical values (logging), Alarm status at the same time, Numerical value monitoring in a separate window, Waveform scroll while measuring Data saving destination: Real-time data transfer to EXCEL (new function), or Real-time data acquisition file (LUW format, only for HIOKI) Event marks: can be applied while recording
Data acquisition settings	Data acquisition settings for the HiLOGGER Saving: The setting for multiple HiLOGGERs can be saved together in one file (LUS format); Instrument configuration settings can be sent and received
Waveform display	 Processed data file: Real-time data acquisition file (LUW format), Record to internal memory data (MEM format) Display format: Simultaneously display waveform and numerical value, (time-axis divided display possible) Maximum number of channels: 300 channerls (measurement data, used with the LR8400-20s, LR8400-21s) + 60 channels (waveform processing data) Others: Waveform display on sheet for each channel, scroll, record event mark, cursor, hard copy, numerical value display

Data conversion	Target data: Real-time data acquisition file (LUW format), Record to internal memory data (MEM format), Waveform processing data Converted sections: All data, designation section Format: CSV format (separate by comma, space, tab), transfer to EXCEL spreadsheet, arbitrary data thinning	
Parameter calculations	Target data: Real-time data acquisition file (LUW format), Record to internal memory data (MEM format), Data acquired in real time, Waveform processing data Calculation items: average, peak, maximum values, time to maximum values, minimum values, time to minimum values, ON time, OFF time, count the number of ON time and OFF time, standard deviation, integration, area values, totalization	
Search function	Target data: Real-time data acquisition file (LUW format), Record to internal memory data (MEM format), Waveform processing data, Search mode: event mark, time and date, maximum position, minimum position, maximum pole, minimum pole, alarm position, level, window, amount of change	
Print function	Supported printer: printer compatible with the OS Target data: Real-time data acquisition file (LUW format), Record to internal memory data (MEM format), Waveform processing data Print format: waveform image, report format, list print (channel settings, event, cursor value) Print area: the entire area, area between cursors A and B Print preview: supported	
Waveform processing	Processing items: Four arithmetic operations Number of processing channels: 60 channerls	

Main units and Options in Detail

LR8400-20 (with built-in VOLTAGE/TEMP UNIT × 2)

Built-in units are equivalent to the VOLTAGE/TEMP UNIT LR8500 (15 ch) × 2 Caution: Built-in units cannot be removed or changed

Built-in units are equivalent to the UNIVERSAL UNIT LR8501 (15 ch) × 2 Caution: Built-in units cannot be removed or changed

(with built-in UNIVERSAL UNIT × 1, VOLTAGE/TEMP UNIT × 1) Built-in units are equivalent to the UNIVERSAL UNIT LR8501 (15 ch) × 1, and VOLTAGE/TEMP UNIT LR8500 (15 ch) × 1 Caution: Built-in units cannot be removed or changed

Measurement and input options

PC Card Precaution

Compatibility and performance are not guaranteed for PC cards

made by other manufacturers. You

may be unable to read from or save

data to such cards.

se onlv PC Cards sold bv HIOKI

VOLTAGE/TEMP UNIT LR8500 2 terminals M-3 mm screw type, 15 channels Voltage, Temperature with thermocouple, or Humidity measurement

storage (CF card)

Supplied with PC Card adapter PC CARD 2G 9830 (2 GB capacity)

> PC CARD 1G 9729 (1 GB capacity)

(512 MB capacity)

(256 MB capacity)

PC CARD 512M 9728

PC CARD 256M 9727

UNIVERSAL UNIT LR8501 4 terminals push-button type, 15 channels Voltage, Temperature with thermocouple, Platinum Resistance temperature sensor, Humidity, or Resistance measurement

HUMIDITY SENSOR Z2000 m (9.84 ft) length

Charges while installed in the HiLOGGER

BATTERY PACK Z1000 NiMH. Charges while install

AC ADAPTER 9418-15 Supplied as standard, 100 to 240 V AC

CARRYING CASE C1000 FIXED STAND Z5000

For wall hanging and slanted mounting ent for options
